

Project – Foundational Document (دیدیار) DidYar

Version: 1.0

Date of Initial Draft: 30 May 2026

Author / Founder: Bagherali Fazeli

.1

Project Overview

DidYar is a digital reading system designed specifically for individuals with low vision, age-related visual impairment, and degenerative eye conditions such as

(Age-related Macular Degeneration (AMD

Diabetic Retinopathy

Glaucoma

Other central or peripheral vision disorders

The primary goal of DidYar is to provide an accessible, distraction-free, and highly customizable reading environment for long-form texts, initially focused on the Holy Quran, and later expandable to other religious, educational, and literary content

.2

Design Philosophy

:The core principle of DidYar is

Technology must adapt to the user's visual ability, not require the user to adapt to the "technology"

The system is designed to minimize cognitive and visual load, eliminate interaction complexity, and ensure uninterrupted reading experience for users with visual limitations

.3

Project Objectives

Improve accessibility to textual content for visually impaired users

Simplify reading experience for elderly users

Reduce accidental touch interactions

Provide a stable long-form reading environment

Enable deep personalization of reading display

Create a scalable platform for diverse textual content

.4

Core Innovations

4.1

Single-Line Horizontal Text Rendering

.Text is displayed as a continuous single-line stream with horizontal navigation only

:Expected benefits

Reduces line-loss and reading disorientation

Minimizes vertical eye movement

(Supports users with central vision impairment (e.g., AMD

Improves reading continuity and focus

4.2

Distraction-Free Reading Mode

:During reading mode

All menus are hidden

Settings are locked

UI elements are minimized

Only text and optional guidance overlay are visible

4.3

Secure Settings Access System

:Settings are protected through a multi-step access mechanism

Triple-tap gesture on a lock control

(Followed by authentication (PIN or biometric

:Security behavior

Any touch outside the authentication dialog closes it immediately

Automatic timeout after 10 seconds of inactivity

Immediate return to reading mode upon cancellation or failure

4.4

Reading Guide Line

.A configurable visual guide line assists reading alignment

:Customizable parameters

Color

Thickness

Length

Transparency

.This feature enhances tracking for users with central vision loss

4.5

Independent Bookmark System

:The system supports multiple independent reading bookmarks

Quran completion bookmark

Surah-specific bookmark

Free reading bookmark

.Each bookmark maintains its own reading position independently

4.6

Display Personalization

:Users can customize

Font type

(Font size (high scalability

(Font weight (bold enhancement

Character spacing

Word spacing

Text color

Background color

4.7

Predefined Vision Profiles

:The system provides preset configurations for specific visual conditions

Severe AMD

Moderate AMD

General low vision

Glaucoma

Diabetic retinopathy

.5

Reading Management System

:The application records

Last reading position

Reading history

Surah and verse usage frequency

Quran completion count

.The system automatically resumes reading from the last position upon launch

.6

Goals and Progress Tracking

:Users can define reading goals for

Verses

Surahs

Full Quran completion cycles

.Progress is tracked and updated continuously

.7

Audio Notifications

:The system supports audio feedback for

Completion of reading goals

Quran completion events

Progress milestones

Custom user-defined events

.8

Core Content Structure

:The initial free version includes

The Holy Quran

Full low-vision reading features

Progress tracking system

Bookmark system

(Audio recitation (Tartil

:Data structure

Juz → Surah → Ayah → Text

.9

Supported Content Expansion

DidYar supports a charitable content model where individuals or institutions may sponsor

.content digitization and preparation

:Examples include

(Dua and supplications (e.g., Dua Kumayl

Nahj al-Balagha

Psalms and religious texts

(Literary works (e.g., Shahnameh

Educational and cultural texts

.Once processed, content becomes freely available to all users

.10

(Premium Version (Extended Features

:The professional version may include

Import Word / PDF / TXT files

(Optical Character Recognition (OCR

Personal library management

Newspaper and document reading

Custom content ingestion tools

.11

Technology Stack

:The system is planned to be developed using

Flutter framework

:Cross-platform support

Android

iOS

(Windows (future expansion

.12

System Scalability

DidYar is designed as a scalable reading platform capable of evolving from a Quran-focused application into a universal reading system for multiple content types

.13

Intellectual Property Statement

This document represents the initial conceptual foundation of the DidYar project, including its design philosophy, core features, system structure, and development direction

It serves as a baseline reference for future technical specifications, system architecture design, and implementation phases

End of Document

DidYar Project Foundation – Version 1.0
